

SpyBot Want Scan External HDD

Problem: When you connect an external HDD to a computer and run SpyBot you can't tell if it is scanning the external HDD or not. If you try to find the option to scan external HDDs (Like you can in AD Aware) you notice that there is no option for this. Here is how to accomplish this.

Solution: The first thing that you will need to do is make sure that you are on SpyBot 1.6.30 or later. Now open up both My Computer and SpyBot and then follow these steps.

- 1) Go to SpyBot and on the menu at the top click on Mode and then click on Advance.
- 2) You will get a warning message asking if you are sure you want to do this click on YES.
- 3) Now on the left hand side click on the word Settings.
- 4) Now click on Directories.
- 5) You will now need to shrink the My Computer window that you opened earlier so that you can see both the SpyBot window and the My Computer window.
- 6) Now drag the external HDD from My Computer to the white box under Download Directories in the SpyBot window. For example, if your external HDD shows up as letter E: you will need to drag the letter E: from the My Computer window to the SpyBot window under Download Directories.
- 7) Also, make sure you click on the box beside Check Subdirectories Of The Above.
- 8) Once you have done this you can close out of the My Computer window and go back to the SpyBot window.
- 9) Now on the left-hand side of the SpyBot window click on where it says SpyBot-S&D and then click on Check For Problems.
- 10) It will now search your external HDD.
